

# Enhance Tones

## Description:

Find one of your pictures where the lighting or exposure is off. Use the Lightroom and Photoshop tools we discussed in this course to fix it.

## Keys to Success:

- Concentrate on the Lightroom sliders in the Basic panel, especially Highlights, Shadows, Whites, and Blacks.
- Use the Exposure slider only if you have an extreme problem.
- Play with Curves adjustment layers in Photoshop. Keep them simple for now and don't use any complicated curves. Just pull in the end points and/or pull the line up to brighten or down to darken.

## Upon Completion of this Assignment:

This will allow you to save a lot of really nice pictures. Sometimes the exposure is just a little off, and now you can fix it. You'll also be able to enhance good pictures as well. You are now on your way to being in complete control over the tones in your pictures.

Tomorrow you will learn how to do this more selectively, which will make these tools even more powerful!
